

ENTERPRISE SOLUTIONS · DATA & AI

PRESENTATION TEMPLATE LIBRARY

# Sample Formats

A reusable UI/UX reference for every BIM deck — covers, dividers, cards, tables, comparisons, pricing, charts, timelines, flows and closing layouts in the house style.

---

BIMGOC · Enterprise Solutions, Data & AI

Prepared by Thomas @ HeinThura

SECTION 01

# Section Divider Layout

A full-bleed divider with a photo panel to open each major part of the deck. One short line of context sits here.

# Card Grid

A 3-column grid for capabilities, roles, or building blocks — accent bar colour codes each card

## Card title

A short supporting paragraph. Keep each card to two or three lines so the grid stays balanced and scannable.

## Card title

Colour the accent bar to group related cards or signal a category. Title sits in the accent colour.

## Card title

Cards carry a soft shadow and rounded corners — the standard container for any list of peers.

## Card title

Six cards fit comfortably in two rows. Drop to three or four for a lighter, larger-text layout.

## Card title

Re-use the card() helper everywhere — consistent radius, border and padding across the whole deck.

## Card title

Use INK for a neutral / foundational card. Keep the body text in INK regardless of accent.

FORMAT • 3-COLUMN CARD GRID (CARD + ACCENT)

# Data Table

Accent header row, zebra body rows, and a highlighted total row — for sizing, pricing or comparison data

| Item / component | Qty | Unit | Spec       | Notes                                                 |
|------------------|-----|------|------------|-------------------------------------------------------|
| First line item  | 2   | ea   | Spec value | A short note in the wide right column for context     |
| Second line item | 3   | ea   | Spec value | Zebra striping alternates the row fill automatically  |
| Third line item  | 4   | ea   | Spec value | Left-align text columns; centre short numeric columns |
| Total            | 9   |      |            | Highlight the summary row in a tinted accent fill     |

**When to use:** any structured, multi-column data. Keep headers short, right-size the columns to content, and reserve the tinted row for totals or the recommended option.

FORMAT • DATA TABLE (ACCENT HEADER + ZEBRA + TOTAL)

# Two-Column Comparison

Side-by-side option cards with PROS / CONS, a RECOMMENDED badge, and a dark recommendation banner

## Option A • the chosen path

RECOMMENDED

*One-line description of this option*

**PROS**

- ✓ A clear advantage stated in plain language
- ✓ A second benefit that matters to the audience
- ✓ A third supporting point keeps the card balanced

**CONS**

- ✗ An honest trade-off — never leave CONS empty
- ✗ A second, lesser limitation

## Option B • the alternative

*One-line description of this option*

**PROS**

- ✓ Where this option genuinely wins
- ✓ A second, narrower benefit

**CONS**

- ✗ The reason it isn't the default choice
- ✗ A second cost or risk to flag

**Recommendation:** state the decision in one sentence and the single most important reason for it. Close the dark banner by noting the alternative stays open if circumstances change.

FORMAT • TWO-COLUMN COMPARISON + RECOMMENDATION BANNER

# Numbered Rows & Stat Callouts

Left: a sequence of numbered steps. Right: big-number KPI tiles for headline figures

1

First step

A numbered row pairs a coloured circle with a title and one line of detail — ideal for steps or ranked points.

2

Second step

Stack three or four rows; the left accent stripe ties them to the row's number colour.

3

Third step

Keep detail to a single line so the rhythm stays even down the column.

# Architecture Diagram

Layered planes with a cluster boundary — edge, application and data tiers wired top-to-bottom

North-south traffic terminates at the edge, fans into the gateway tier, then to services and the data plane. Swap node labels per engagement.

FORMAT • LAYERED ARCHITECTURE (PLANES + CLUSTER BOUNDARY)

# Process Workflow

Left-to-right stages as chevrons with step numbers, plus a detail band — for methods, pipelines or request flows

## What happens

Describe the activity in each stage in one or two lines. Keep the chain to four–six stages so the chevrons stay legible.

## Inputs → outputs

Note the artefact each stage consumes and produces, so the flow reads as a real pipeline rather than a label strip.

## Owner / gate

Name who owns the stage and any gate that must pass before the next chevron. Add a swimlane variant if needed.

# Branching Workflow

A pipeline that splits at a decision gate — pass continues, low-confidence routes to human review with a feedback loop

FORMAT • BRANCHING WORKFLOW (DECISION GATE + FEEDBACK)

# Three-Column Comparison

Row-label column + three option columns, colour-coded verdicts, a RECOMMENDED badge and an insight banner

|                | Option A<br><i>vendor / approach</i> | RECOMMENDED<br>Option B<br><i>vendor / approach</i> | Option C<br><i>vendor / approach</i> |
|----------------|--------------------------------------|-----------------------------------------------------|--------------------------------------|
| Capability one | Strong                               | Built-in                                            | Add-on                               |
| Capability two | Partial                              | Strong                                              | Manual                               |
| Deployment     | Cloud only                           | Any / hybrid                                        | Self-host                            |
| Cost model     | Per-call \$\$\$                      | Flat / owned                                        | Licensed                             |
| Lock-in        | High                                 | None (OSS)                                          | Medium                               |
| Operations     | Managed                              | Self-managed                                        | Managed+custom                       |

**Insight:** all three can do the basics — the deciding factors are cost model and lock-in. Green = strong fit, amber = caveat, grey = weak. Add a glyph legend if cells use ✓/✗ instead of text.

FORMAT • THREE-COLUMN COMPARISON MATRIX (+ RECOMMENDED)

# Pricing / Editions Tiers

Three tier cards with a coloured header, hero price, line-items and a highlight badge

| Starter       |              |   | Professional          |           |   | Enterprise                       |           |   |
|---------------|--------------|---|-----------------------|-----------|---|----------------------------------|-----------|---|
| \$X / month   |              |   | \$Y / month           |           |   | Custom <small>contact us</small> |           |   |
| Core features |              | ✓ | Everything in Starter |           | ✓ | Everything in Pro                |           | ✓ |
| Users         | Up to 10     |   | Users                 | Up to 100 |   | Users                            | Unlimited |   |
| Support       | Business hrs |   | Support               | 24×7      |   | Support                          | Dedicated |   |
| SLA           | —            |   | SLA                   | 99.9%     |   | SLA                              | 99.95%    |   |

**Tip:** highlight one tier with a badge and a coloured header to anchor the eye. Keep line-items aligned across cards so the ladder is easy to compare.

FORMAT • PRICING / EDITIONS TIER CARDS

# Roadmap / Phased Plan

Sequential phase cards with a coloured header and week-range chip, joined by arrows

FORMAT • ROADMAP / PHASED PLAN BAND

# Project Timeline (Gantt)

Task rows against week columns, staggered bars and a milestone marker

# Org / Team Structure

Top-down hierarchy with connectors down to a row of team-member cards

FORMAT • ORG / TEAM HIERARCHY TREE

# 2×2 Quadrant

Four colour-capped panels — for matrices, themes, or before/after dimensions

## Quadrant one

- A grouped theme or dimension
- Two or three supporting points

## Quadrant two

- Each panel is balanced in size
- Caps colour-code the four cells

## Quadrant three

- Use for impact × effort matrices
- Or for four parallel workstreams

## Quadrant four

- Keep bullets short and even
- Add axis labels if it's a true matrix

# Numbered Step Grid

Six numbered cards in a 2×3 grid — for a sequential method or set of principles

|                                                                                                   |                                                                                                   |                                                                                               |
|---------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|
| <div><div>1</div><div>Step title</div><div>One line describing the step or principle.</div></div> | <div><div>2</div><div>Step title</div><div>Keep each card to a single short sentence.</div></div> | <div><div>3</div><div>Step title</div><div>The numbered badge sets reading order.</div></div> |
| <div><div>4</div><div>Step title</div><div>Caps colour-code by phase or owner.</div></div>        | <div><div>5</div><div>Step title</div><div>Six cells balance a half-page method.</div></div>      | <div><div>6</div><div>Step title</div><div>Drop to four for a lighter layout.</div></div>     |

FORMAT • 2×3 NUMBERED STEP GRID

# Agenda / Contents

Numbered agenda cards in two columns with a left accent bar

01

## Context & objectives

why we're here

02

## Current state

what exists today

03

## Proposed approach

the recommendation

04

## Architecture

how it fits together

05

## Plan & timeline

phases and milestones

06

## Commercials

pricing and terms

07

## Risks & mitigations

what could go wrong

08

## Next steps

decisions needed

FORMAT • AGENDA / TABLE OF CONTENTS GRID

# SLA & Priority Matrix

Response/resolution SLA table, an impact×urgency matrix, and a severity legend

## 1 • Response & resolution targets

| Priority      | Response | Resolution |
|---------------|----------|------------|
| P1 • Critical | 15 min   | 4 hrs      |
| P2 • High     | 30 min   | 8 hrs      |
| P3 • Medium   | 4 hrs    | 2 days     |
| P4 • Low      | 1 day    | 5 days     |

## 2 • Impact × urgency → priority

|      |          |     |     |      |
|------|----------|-----|-----|------|
|      | impact ↓ | Low | Med | High |
| High |          | P2  | P1  | P1   |
| Med  |          | P3  | P2  | P1   |
| Low  |          | P4  | P3  | P2   |

- P1

Critical — service down / data at risk
- P2

High — major function impaired
- P3

Medium — partial / workaround exists
- P4

Low — minor or cosmetic

FORMAT • SLA TABLE + PRIORITY MATRIX + LEGEND

# KPI Progression

Big-number tiles linked by arrows to show a before → after change

### What moved

Name the metric and the driver behind the change in one line.

### Why it matters

Tie the delta to a business outcome the audience cares about.

### How we get there

The action that converts today's number into the target.

**Action:** state the single commitment that delivers the target, with an owner and a date.

FORMAT • KPI BEFORE → AFTER PROGRESSION

# Labeled-Row List

Full-width rows pairing a bold label with a description — clean for definitions, criteria or scope

## Objective

A bold left label in its own block, with the explanation in the wide right column. Great for definitions and criteria.

## Scope

Each row is a full-width rounded band. Keep the label to one or two words and the description to one or two lines.

## Approach

Alternate nothing — consistency is the point. Four to five rows fill the page without feeling crowded.

## Outcome

Close with the result or deliverable. Swap to a tinted label block to emphasise a particular row.

FORMAT • LABELED-ROW LIST (LABEL + DESCRIPTION)
